PROFESSIONAL SUMMARY

AI-Native Software Engineer specializing in generative AI systems, LLM integration, and intelligent automation. Proven track record building production-grade RAG architectures, predictive analytics engines, and AI-powered platforms serving global markets. Expert in Python, Node.js, FastAPI, and cloud-native development. IBM-certified Agile/Scrum practitioner with demonstrated ability to collaborate with cross-functional teams and deliver cutting-edge technology solutions. Passionate about high-agency engineering and innovation that drives measurable business impact. Seeking remote/hybrid opportunities with global compensation.

TECHNICAL SKILLS

Frontend: HTML5, CSS3, JavaScript (ES6+), EJS, React.js

Backend: Node.js/Express, Python/FastAPI, RESTful APIs, Java

Database: PostgreSQL, SQLite, MongoDB, Pinecone Vector DB

Mobile: React Native/Expo

Tools & Methods: Git/GitHub, GitHub Actions, Postman, Agile/Scrum (IBM-certified)

Exposure: WordPress concepts (via custom CMS builds), Cloudinary

SOFT SKILLS

Collaboration: Cross-functional teamwork | Client requirement gathering | Active listening | Constructive feedback

Problem-Solving: Critical thinking | Rapid AI framework adoption (LangChain, Groq) | Tech stack adaptability

Leadership: High-agency execution | Technical documentation | Strategic system architecture

FREELANCE SOFTWARE ENGINEER & AI DEVELOPER

Before You Sign: Vehicle Verification Platform | *Stack: Node.js/Express, React Native/Expo, PostgreSQL + PostGIS, Socket.io, Google Gemini AI, Cloudinary* | September 2025 – January 2026

- Developed end-to-end vehicle certification system connecting dealerships, admin verifiers, and customers through role-based dashboards
- Engineered QR code verification system with embedded VIN/plate data for instant mobile lookup
- Designed SQLite relational schema with soft-status workflows (pending, verified/rejected) and audit trail tracking
- Implemented secure file upload pipeline with Multer (5MB limit, 10-file max) supporting both local and Vercel serverless deployment

Casalinga Tours: Ai-Powered Travel Booking Platform | *Stack: Node.js, Google Gemini API, Cloudinary, PostgreSQL* | June 2024 – Present

- Built end-to-end booking system with 3 user roles (customers, managers, admins) and session-based authentication — comparable to WordPress user management
- Engineered responsive EJS frontend with dynamic search filters, availability checking, and favorites system using subquery patterns

- Created automated PDF ticket generation with branded styling and dynamic booking references — content automation expertise
- Implemented Cloudinary-integrated media management with automatic image transformation (WebP optimization, 1200px limits) performance-focused asset handling
- Designed PostgreSQL analytics dashboard with revenue trends and customer lifetime value calculations

KEY PROJECTS — AI & FULL-STACK

AXIORA-AI: Multi-Tenant RAG Chatbot Platform

- Built embeddable AI chatbot platform with single-script deployment, sandboxed iframe isolation, and automatic website ingestion
- Architected dual-stack system: Python FastAPI for RAG pipeline (vector search, re-ranking, LLM generation via Groq) and Node.js for multi-tenant orchestration
- Implemented topology-aware response system classifying content as comparative matrix, sequential procedure, browsable inventory, or narrative exposition
- Created emotional intelligence layer detecting frustration/urgency/confusion with automatic tone adaptation
- Designed multi-tenant vector database isolation using Pinecone namespaces for separate client knowledge bases
- Built automated ingestion pipeline with Playwright deep-crawling, SSRF protection, and rate-limited background processing

AXIORA-AI: Multi-Tenant RAG Chatbot Platform

- Built dual-stack platform with Node.js API and Python ML microservices; improved application response rate from 12% to 34% through data-driven targeting
- Engineered predictive analytics engine using scikit-learn identifying resume tailoring and employee referrals as top success predictors (0.42 and 0.38 correlation scores)
- Implemented ATS optimizer with semantic keyword matching and formatting validation; increased resume parsing success rate from 67% to 91%
- Designed 45-field tracking schema capturing referral networks and response times; reduced time-per-application from 45 to 18 minutes via automation
- Created CV parsing pipeline extracting skills from PDF/DOCX against 200+ technology database; automated 90% of manual data entry

EDUCATION & CERTIFICATIONS

Advanced Diploma in Information and Communication Technology (Applications Development)

University of Mpumalanga, Mbombela | Completed: November 2025

Diploma in Information and Communication Technology (Applications Development)

University of Mpumalanga, Mbombela | Completed: December 2023

Certificates: IBM Applied Data Science with Python, IBM Agile Explorer (Scrum/Kanban), IBM Data Fundamentals
