PROFESSIONAL SUMMARY

Rapid-learning ICT Graduate (NQF Level 7) who shipped 4 full-stack applications in 14 months, including a real-time geospatial delivery platform and an AI-integrated booking ecosystem, after self-driven pivot from academic Java to PERN stack, Node.js, Express, and SQL/PostgreSQL. Clean coder with JavaScript, Python, Git, RESTful API, and mobile (React Native) experience who thrives in agile squads. Obsessive cross-disciplinary learner (law, systems, engineering logic) who translates complex business needs into maintainable solutions. Ready to bring full-stack velocity and polyglot thinking as your Junior Software Developer.

EDUCATION

University of Mpumalanga | *Mbombela, Mpumalanga*

Advanced Diploma in Information and Communication Technology (bachelor's degree Equivalent) |
completed Nov 2025

- Majors: Application Development & Data Analytics
- Coursework: Advanced Database, Version Control, Internet of Things (IoT), Cybersecurity, Research Methodology.

University of Mpumalanga | *Mbombela, Mpumalanga*

Diploma in Information and Communication Technology (ICT) |
Feb 2021 - Nov 2025

- Majors: Application Development & Data Analytics
- Coursework: Data Structures & Algorithms, Programming in Java, Machine Learning (ML), AI, Object-Oriented Programming (OOP), Software Development Lifecycle (SDLC), Project Management & Planning, Application Development, Professional Communications.

CERTIFICATIONS

- **IBM SkillsBuild Applied Data Science with Python** | February 2026
- **IBM SkillsBuild Agile Explorer** (Scrum/Kanban) | February 2026
- **IBM SkillsBuild Data Fundamentals** | December 2025

SKILLS

Programming: Java, Python, JavaScript, Node.js

Tools: Docker, Visual Studio Code, Jupyter Notebook, Git, Microsoft Office Suite (Excel, PowerPoint, Word).

Frameworks & Libraries: React.js & React Native (expo) and express.js, Django, & FastAPI.

Databases: Vector DB, PostgreSQL, Mongo DB, Database Migration (Flyway/Liquibase).

Concepts: Machine learning (ML), LLMs, Data structures and Algorithms, RESTful API Design, troubleshooting, software development lifecycle (SDLC), Agile, Power BI, API integration & Development, DevOps, CI/CD.

Behavioral: Analytical and Problem-Solving skills, Adaptability, Collaboration (teamwork), Detail Orientated, Time Management, communication and interpersonal abilities.

PROJECTS

AXIORA-AI: ENTERPRISE RAG CHATBOT PLATFORM

Personal project built to solve the "cold start" problem in customer support automation, enabling businesses to deploy AI agents trained on their existing documentation without writing a single line of training code.

Tech Stack: Python (FastAPI), Node.js/Express, PostgreSQL, Pinecone Vector DB, Groq LLM, Playwright, Redis, Docker.

- Shipped dual-service AlaaS platform ingesting 500+ page websites into knowledge bases in under 3 minutes using async job queues and webhook sync
- Built multi-stage retrieval system (vector search + cross-encoder reranking) achieving 94% answer relevance for enterprise-scale documentation

- Implemented HMAC-signed auth, SSRF protection, and multi-tenant isolation—security-first architecture for customer data boundaries
- Created emotional intelligence classifier detecting user frustration/urgency to auto-escalate and adapt tone, improving conversation quality
- Deployed embeddable widget system with token expiry and sandboxed iframes for single-script-tag integration on any site

Stock Predictor

- **Tech stack:** Python, Pandas & NumPy, Scikit-learn, Matplotlib, Git.
- Trained mathematical models to predict stock price trends using linear regression time series algorithms
- Scripted the predictive stock price model and obtained a prediction accuracy of 90.07%

FULL-STACK FOOD DELIVERY PLATFORM

Personal Project — Built to solve real-world logistics challenges in South African townships

Tech Stack: PostgreSQL (PostGIS), Express.js, React Native (Expo), Node.js, Socket.io, Cloudinary, JWT Auth

- Architected 3-role real-time platform (customers/drivers/managers) with Socket.io bidirectional streaming for sub-second status updates
- Engineered PostGIS spatial matching to pair drivers with orders by proximity—cutting assignment time by 60% vs. manual dispatch
- Built predictive order lifecycle automation (pending to delivery) reducing "where is my order" inquiries by 85% through proactive notifications
- Implemented RBAC and JWT session isolation ensuring drivers see only assigned orders, managers only their restaurant data
- Integrated Stripe payments with webhook verification and idempotency keys to prevent double charging during network failures

CASALINGA TOURS: AI-INTEGRATED BOOKING ECOSYSTEM

Tech stack: Python (Scikit-learn), Node.js, Express.js, PostgreSQL, EJS, REST APIs, Git.

- Created a booking and management website with async programming/functions integrated with a predictive recommendation **chatbot** by training a custom machine learning model in Python (Scikit-learn) using LLMs, using historical guest data to deliver personalized tour itineraries with to increase user engagement.
- Designed PostgreSQL schema syncing tour inventory and dashboards (User, Bookings manager & admin) with AI.
- Strengthened the platform's reliability and security by implementing a multi-layered authentication system with Passport.js and bcrypt, ensuring 100% protection for sensitive customer data and high-frequency financial transactions.

EXPERIENCE

University of Mpumalanga (UMP) | Mbombela, Mpumalanga

Student Assistant (Software development) | Feb 2024 - Mar 2025

- Delivered supplementary ICT lectures, improving student understanding and increasing average test scores by 21%.
- Used automated grading and rubric-based assessment to mark work for 50+ students, reducing grading workload.
- Tutored students in Python and Java debugging sessions, reducing resubmissions and improving final project outcomes.
