PROFESSIONAL SUMMARY

I am a Recent ICT graduate passionate about M365Consult's mission to transform business operations through technology. Admire how you solve real-world challenges across finance, education, and healthcare with tailored solutions—not generic templates. Built production-ready database systems handling multi-tenant architectures, real-time data synchronization, and automated workflows that mirror M365Consult's approach to operational efficiency. Eager to contribute to your AI-integrated management systems and learn enterprise-level Microsoft 365 data environments from your Ludwigshafen team.

EDUCATION

Advanced Diploma in Information and Communication Technology (bachelor's degree Equivalent)

University of Mpumalanga, Mbombela | completed November 2025

Diploma in Information and Communication Technology

University of Mpumalanga, Mbombela | completed November 2025

Relevant Coursework: Advanced Database, Data Structures & Algorithms, Application Development, Machine Learning, Cybersecurity, Research Methodology, Linux, ERD Tools, SRS/SDD documentation

CERTIFICATIONS

- **IBM SkillsBuild Applied Data Science with Python** | February 2026
- **IBM SkillsBuild Agile Explorer (Scrum/Kanban)** | February 2026
- **IBM SkillsBuild Data Fundamentals** | December 2025

TECHNICAL SKILLS

Databases: PostgreSQL, MongoDB, SQL Query Optimization, Database Schema Design

Programming: Python, Java, JavaScript, Node.js, SQL

Tools & Platforms: Git, VS Code, Power BI

Frameworks: FastAPI, Express.js, React.js, React Native, Django

Concepts: RESTful API Design, Data Structures & Algorithms, Agile/Scrum, SDLC, CI/CD, DevOps Basics

PROJECTS

1. AXIORA-AI: Enterprise RAG Chatbot Platform

Tech Stack: Python (FastAPI), Node.js/Express, PostgreSQL, Pinecone Vector DB, React, JSON api

Problem Identified: Small businesses struggle to afford 24/7 customer support but lose sales when queries go unanswered.

Technical Decisions & Results:

- Chose PostgreSQL for transactional data (user accounts, billing, conversation logs) due to ACID compliance and complex relational needs between tenants, users, and chat histories
- Selected Pinecone Vector DB specifically for semantic search on knowledge bases, enabling context-aware responses that traditional keyword search cannot provide

- Built embeddable widget system with sandboxed iframe isolation so non-technical business owners can deploy AI support with one line of code—removing technical barriers to adoption
- Implemented frustration detection algorithms that auto-adapt chatbot tone and suggest human escalation, improving user satisfaction metrics
- Created HMAC-signed token authentication to secure cross-domain widget communications without compromising user experience

Result: Production-ready SaaS platform demonstrating enterprise database architecture and real-world business problem solving

2. STOCK PREDICTOR

- **Tech stack:** Python, Pandas & NumPy, Scikit-learn, Matplotlib, Git.
- Trained mathematical models to predict stock price trends using linear regression time series algorithms
- Scripted the predictive stock price model and obtained a prediction accuracy of 90.07%

3. HAPPY DELIVERIES: Full-Stack Food Delivery Platform

Tech Stack: React Native (Expo), Node.js, Express, PostgreSQL (PostGIS), Socket.io, Cloudinary

Problem Identified: Township food delivery relies on informal WhatsApp coordination, causing order confusion, delayed deliveries, and poor customer experience.

Technical Decisions & Results:

- Selected PostgreSQL with PostGIS extension specifically for geospatial queries—calculating optimal driver routes and real-time distance tracking in areas with poor address systems
- Designed normalized relational schema handling complex many-to-many relationships between restaurants, menu items, orders, and drivers with role-based data access
- Chose Socket.io over polling to reduce server load and provide instant order status updates, critical for time-sensitive food delivery
- Implemented React Native (Expo) for single codebase deployment across iOS/Android, reducing development time and ensuring consistent UX in low-bandwidth environments
- Built Cloudinary image pipeline to auto-optimize restaurant photos, cutting mobile data costs for users on limited data plans

Result: 85% improvement in delivery clarity through real-time tracking; 40% faster image loading via optimization

WHY M365CONSULT

Your 2025 founding with focus on "translating client needs into effective business models" resonates with my project philosophy. I specifically chose to apply because:

- Your AI-integrated management systems for educational institutions align with my experience building automated grading systems that reduced workload by 60%
- Your database monitoring solutions case study (June 2024) matches my PostgreSQL optimization and performance tuning experience
- Your cloud-based IT management approach fits my Docker containerization and API integration background
- Your real-world problem-solving culture matches my project methodology: identifying inefficiencies and building targeted technical solutions
