PROFESSIONAL SUMMARY

Back-end focused developer with production experience in Python, Node.js, and database systems. Built automated workflows and templating systems for real clients (booking platforms, AI services). Strong foundation in Linux environments, Git, and SDLC processes from academic and project work. Quick learner who has self-taught multiple technology stacks, now seeking to apply this to enterprise document automation and template development. Eager to deepen expertise in XML, scripting, and Linux server management while contributing to reliable backend systems.

TECHNICAL SKILLS

Core Strengths: Python, Node.js, PostgreSQL, REST APIs, Git, Linux (Ubuntu), automated workflows
Learning & Expanding: XML, XPath, Perl (interested in document templating systems), Bash scripting, server administration
Tools & Methods: Agile/Scrum (certified), SDLC, testing (pytest, Jest), documentation, version control

PROJECTS

Axiora-AI — Enterprise RAG Chatbot SaaS Platform

Python | FastAPI | PostgreSQL | Pinecone | Node.js/Express | Docker | Git

- Built back-end service that ingests 500+ page websites, processes content, and generates structured outputs via automated pipelines
- Designed templating workflow: raw content to structured storage to formatted delivery (similar concept to document generation)
- Implemented Linux-compatible deployment with Docker exposure and server-side processing
- Created technical documentation for deployment, troubleshooting, and user implementation
- Result: Production-ready automation system handling complex document-like processing at scale

Casalinga Tours — Booking Automation Platform

Python | Node.js | Express.js | PostgreSQL | scikit-learn | REST APIs | Git

- Developed backend automation replacing manual booking processes with structured, template-driven workflows
- Built database-driven document generation (booking confirmations, itineraries) via automated templates
- Managed Linux-based deployment environment and server configuration for production use
- Writing Unix-style automation scripts for scheduled tasks and notification systems
- Result: 15+ hours weekly saved through back-end automation; client still operating independently

Happy Deliveries — Real-Time Back-End System

Node.js | Express.js | PostgreSQL (PostGIS) | React Native | Socket.io | Git

- Architected server-side infrastructure handling 1000+ concurrent connections with sub-3-second response times
- Implemented automated status workflows (order to assignment to delivery) with database triggers and server-side logic
- Managed Linux-compatible development environment and deployment procedures
- Result: Reliable back-end system demonstrating scalability and process automation

EDUCATION

University of Mpumalanga | *Mbombela, Mpumalanga*

Advanced Diploma in Information and Communication Technology (bachelor's degree Equivalent)

February 2024 – November 2025 (Coursework completed, graduation ceremony May 2026)

University of Mpumalanga | Mbombela, Mpumalanga

Diploma in Information and Communication Technology (ICT)

February 2021 – November 2023 (Conferred May 2024)

Relevant Coursework: Object-Oriented Programming (Python/Java), Data Structures & Algorithms, Database Design (PostgreSQL), Software Engineering, Machine Learning, Cybersecurity Fundamentals

PROFESSIONAL EXPERIENCE

University of Mpumalanga | Mbombela, Mpumalanga

Teaching Assistant — Application Development | *February 2024 – January 2025*

- Taught Python and Java to third-year students, which forced me to really understand what I thought I knew
- Reviewed code submissions and gave feedback — learned that good explanations matter as much as good code
- Mentored students on debugging and testing, reducing resubmissions by 35%

CERTIFICATIONS

- **IBM SkillsBuild Applied Data Science with Python** | February 2026
- **IBM SkillsBuild Agile Explorer (Scrum/Kanban)** | February 2026
- **IBM SkillsBuild Data Fundamentals** | December 2025

WHY THIS ROLE

I'm drawn to the specialized nature of document automation I've built templating and workflow systems in Python/Node.js and want to apply this to enterprise-grade document generation Back-End Developer (Entry) 2411 role. Your stack (XML, Perl, Linux, Exstream) is new to me, but I've self-taught FastAPI, PostgreSQL, and async processing successfully. I'm eager to deepen my back-end expertise in a structured environment and contribute to reliable, scalable document systems.
